

Research study for those with newly diagnosed Type 1 Diabetes !

- Are you between **12-18** years of age?
- Are you diagnosed with **type 1 diabetes** with in the **past 3 months**?
- Also, are you a healthy child interested in participating in diabetes research?

- Then you might be eligible to participate in this study.
- The main purpose of this study is to see if the study medication **Byetta** improves after meal blood sugars in kids and adults with newly diagnosed type 1 diabetes.
- We will also compare how quickly food leaves the stomach in healthy controls when compared to the kids with diabetes getting the medication during the study.
- Study includes 4 outpatient visits over a 4-5 month period for kids with diabetes and 2 visits over a period of a month for healthy controls.
- Kids with diabetes will be compensated to a total of 570 dollars and healthy controls get 210 dollars for the entire study.

Location:

Montefiore Medical Center CRC, Moses Research Tower - 4th Floor
111 E. 210th Street, Bronx, NY - 10467.
